Proposed additional Performance Measures - MHT Grant Expansion

Measuring Connection:

Closing the Loop: This indicator will provide rates of follow up information sent to the provider who referred to the family, informing them of the outcome of the family's case with HMG-AK.

Performance Measure:

Percent of referrals for which HMG-AK Family Support Specialists close the feedback loop by sharing information about referral outcomes with referring providers.

Linkage: Linkage measures the proportion of families served by HMG-AK that report a successful connection, with a "successful connection" being defined as the child or family is registered for, has an appointment for, or is receiving at least one service.

Performance Measure:

The proportion of families that report successful connection (Child or family is registered for, has an appointment for, or is receiving at least one service) to a service or program provided through the HMG-AK CAP.

Tracking Long Term Outcomes:

Two options will be explored to link HMG-AK data to other early childhood indicators. These would lay the groundwork for data linkage needed to support analysis to understand the correlation of receipt of navigation services and longer term outcomes such as school readiness and chronic absenteeism. One option will be a client-level integration via the HIE. The other option will be population-level integration via a potential ECIDS system with the state (State ECIDS project contingent on funding from the State PDG B-5 SMART application). Piloting these data linkages could also help develop opportunities for other early childhood serving entities to share data with centralized systems.

Performance Measures:

- Pilot applications submitted (number)
- Pilot applications approved (number)
- Types of data linkages being explored (client level, population level)
- Partner entities involved in data linkage exploration (names of organization/systems)
